| <b>Criterion</b>                                       | <b>Mark</b> | <b>Maximum</b> |
|--|-------------|----------------|
| Clear specification of required computer system(s)     |             | 10             |
| Design overview, DL model(s), standards and principles |             | 10             |
| Data collection / transformation / acquisition         |             | 5              |
| Metadata standards and creation                        |             | 10             |
| Encoding of data/metadata                              |             | 5              |
| Repository / database architecture                     |             | 10             |
| Service architecture: search, browse, annotate, etc.   |             | 10             |
| User interface design                                  |             | 10             |
| Preservation   |             | 10             |
| External interoperability                              |             | 10             |
| Internal interoperability, federation, consistency     |             | 10             |
| Intellectual property rights                           |             | 10             |
| Sustainability, economics                              |             | 10             |
| References   |             | 5              |
| Hardware specs   |             |                |
| Software tools and components                          |             |                |
|  |             |                |
|  |             |                |
