

**Please fill in your Student Number**

**Student Number** : \_\_\_\_\_

Name:

\_\_\_\_\_  
\_\_\_\_\_

Student Number:

\_\_\_\_\_

**University of Cape Town ~ Department of Computer Science**

**Computer Science 1016S ~ 2009**

## **Supplementary Test 2**

<b>Question</b>	<b>Max</b>	<b>Mark</b>	<b>Internal</b>	<b>External</b>
1	14			
2	10			
3	6			
<b>TOTAL</b>	<b>30</b>			

**Marks : 30**

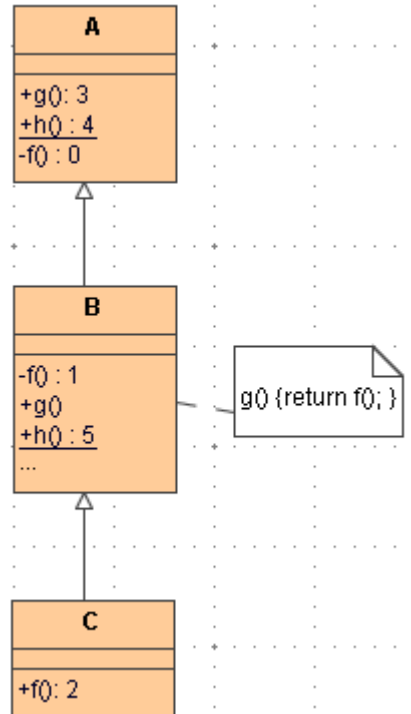

**Time : 40 minutes**

**Instructions:**

- a) Answer all questions.
- b) Write your answers in the space provided.
- c) Show all calculations where applicable.

# Question 1: Polymorphism and UML [14 marks]

Use the following UML diagram to answer question 1

a) What kind of relationship between the classes is it? [2]

---

---

---

---

---

---

---

---

b) Explain the accessibilities via symbols of a UML class diagram [2]

---

---

---

---

---

---

---

---

d) Which statements below are valid? if a statement is valid, what is the output? [4]

1. C ref1 = new A() \_\_\_\_\_

2. A ref1 = new C() \_\_\_\_\_

3. ref1.f() \_\_\_\_\_

4. ref1.g() \_\_\_\_\_

5. ref1.h() \_\_\_\_\_

6. A ref2 = (A) ref1 \_\_\_\_\_

7. ref2.g() \_\_\_\_\_

8. ref2.h() \_\_\_\_\_

## Question 2: Cloneable Interface [10 marks]

Given the following code:

```
public class Person implements Cloneable
{
    int personId;
    String personName;
    .....
    try {
        return super.clone();
    }
    catch (CloneNotSupportedException e) {
        return null;
    }
    .....
}
```

- a) Explain what a **Cloneable** interface is and what it is for? [2]

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

- a) Why is a **CloneNotSupportedException** needed in the above code and when does this exception occur? [2]

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Question 3 [6 marks]

Consider the following methods which are in a LinkedList class.

```
/**
 * Finds the first node containing the target item, and
 * returns a reference to that node. If target is not
 * in the list, null is returned.
 */

private Node<T> find(T target)
{
    T currentItem;
    while (head != null)
    {
        currentItem = head.data;
        if (currentItem.equals(target))
            return head;
        head = head.link;
    }
    return null; //target was not found
}

/**
 * Checks whether the list is empty
 */

public boolean isEmpty( )
{
    // Fill in
}
}
```
